

# S.T.O.P.! Tipline

## “IP Address”

IP address is  
your digital  
fingerprint

If a user of the S.T.O.P.! Tipline sends a tip that requires immediate attention for safety purposes and the sender does not leave contact information. Then contact your local law enforcement and give them the tip with the **IP address** located at the bottom of the form.

The **IP address** is associated with a service provider such as Verizon or ATT. Using the IP address the law enforcement officer can subpoena the service provider to supply name and address of the person who pays for that specific **IP address** for a cell service or internet service.

At that time, the law enforcement can contact the person responsible for the tip and follow through with necessary steps to resolve the situation.
